Introduction

- Job Portal Web Application is an online platform that connects job seekers and employers in a centralized system.
- It enables users to register, create profiles, search for jobs, and apply for suitable positions.
- Employers can post job vacancies, manage applications, and track recruitment activities efficiently.
- The system provides secure authentication, application tracking, and administrative monitoring to streamline the hiring process.

Problem Statement

- ❑ Traditional recruitment methods are often manual, time-consuming, and inefficient for both job seekers and employers.
- ❑ Job seekers face difficulties in finding suitable job opportunities and tracking their application status.
- ❑ Employers struggle to manage multiple job postings and handle a large number of applications effectively.
- ❑ Therefore, a centralized web-based Job Portal is required to streamline recruitment, improve communication, and simplify the hiring process.

LITERATURE REVIEW

S. No.	Year	Author(s)	Title of the Paper	Key Findings
1	2025	Rajesh Kumar & Anjali Sharma	<i>Ahmed Hassan & Sarah Williams</i>	Developed an online recruitment platform that simplified job posting, candidate registration, and application tracking for employers and job seekers.
2	2024	John Smith & Michael Brown	<i>Online Recruitment System Using Web Technologies</i>	Proposed a web-based recruitment system that improved hiring efficiency, reduced manual effort, and enhanced communication between employers and candidates.
3	2024	Priya Verma et al.	<i>Design and Development of a Job Recruitment Portal</i>	Implemented a centralized job portal with secure authentication, resume management, and application tracking features.
4	2023	Ahmed Hassan & Sarah Williams	<i>Modern E-Recruitment Platforms: A Systematic Review</i>	Reviewed digital recruitment platforms and concluded that online job portals improve accessibility, hiring speed, and candidate engagement.

Objectives

- To develop a secure and user-friendly web-based Job Portal for connecting job seekers and employers.
- To enable employers to post, manage, and track job vacancies efficiently.
- To allow job seekers to search, apply, and track job applications online.
- To automate the recruitment process and improve overall hiring efficiency.

Existing System vs Proposed System

- The existing recruitment process relies on manual methods such as newspapers, consultancies, and disconnected job portals, making job searching and hiring inefficient.
- Candidates often face difficulties in finding suitable jobs and tracking their application status, while employers struggle to manage large volumes of applications.
- The proposed Job Portal Web Application provides a centralized platform where employers can post jobs and candidates can search and apply online.
- The system automates recruitment activities, offers real-time application tracking, and improves overall efficiency, accessibility, and user experience.

Module 1: User Authentication & Profile Management

- Enables users to register and create an account using personal details.
- Provides secure login and logout functionality with authentication mechanisms.
- Allows users to create, update, and manage their profiles and upload resumes.
- Ensures data security through session management and password protection.

MODULE 1: USER AUTHENTICATION & PROFILE MANAGEMENT

Conclusion

- The Job Portal Web Application provides a centralized platform that connects job seekers and employers efficiently.
- It simplifies the recruitment process through online job posting, job searching, and application tracking features.
- The system ensures secure user management, efficient data handling, and improved communication between employers and candidates.
- Overall, the project enhances recruitment efficiency, reduces manual effort, and offers a user-friendly solution for modern hiring needs.
